SUMMARY REPORT ON TRANSITIONAL REINSURANCE PAYMENTS AND PERMANENT RISK ADJUSTMENT TRANSFERS FOR THE 2016 BENEFIT YEAR

Released: June 30, 2017

I. Highlights of the Summary Report on Transitional Reinsurance Payments and Permanent Risk Adjustment Transfers for the 2016 Benefit Year

The transitional reinsurance and permanent risk adjustment programs functioned smoothly for the 2016 benefit year, as the Patient Protection and Affordable Care Act-compliant market continued to grow.

- The reinsurance program provides payments to issuers of non-grandfathered, individual market plans subject to the federal market reforms established under the Patient Protection and Affordable Care Act.
- The risk adjustment program applies to any health insurance issuer offering plans in the individual or small group market, with the exception of grandfathered health plans, group health insurance coverage described in 45 C.F.R. § 146.145(c), individual health insurance coverage described in 45 C.F.R. § 148.220, and any plan determined not to be a risk adjustment-covered plan in the applicable Federally certified risk adjustment methodology.
- A total of 767 issuers participated in the reinsurance and risk adjustment programs for the 2016 benefit year, of which 726 established EDGE servers.
- Of 496 issuers participating in the reinsurance program, all issuers successfully submitted the EDGE server data necessary to calculate reinsurance payments.
- Of 751 issuers participating in the risk adjustment program, 710 submitted EDGE server data to calculate risk adjustment transfers. The default risk adjustment charge was assessed to 1 of these issuers for failure to provide HHS with access to the required data and to an additional 41 issuers that did not submit EDGE server data.

The transitional reinsurance program continues to provide significant protection to individual market issuers with exceptionally high-cost enrollees.

- The initial, estimated reinsurance coinsurance rate for the 2016 benefit year is 52.9 percent.¹
- For the 2016 benefit year, as of the date of this report, an estimated \$4 billion in reinsurance payments will be made to 496 issuers nationwide.

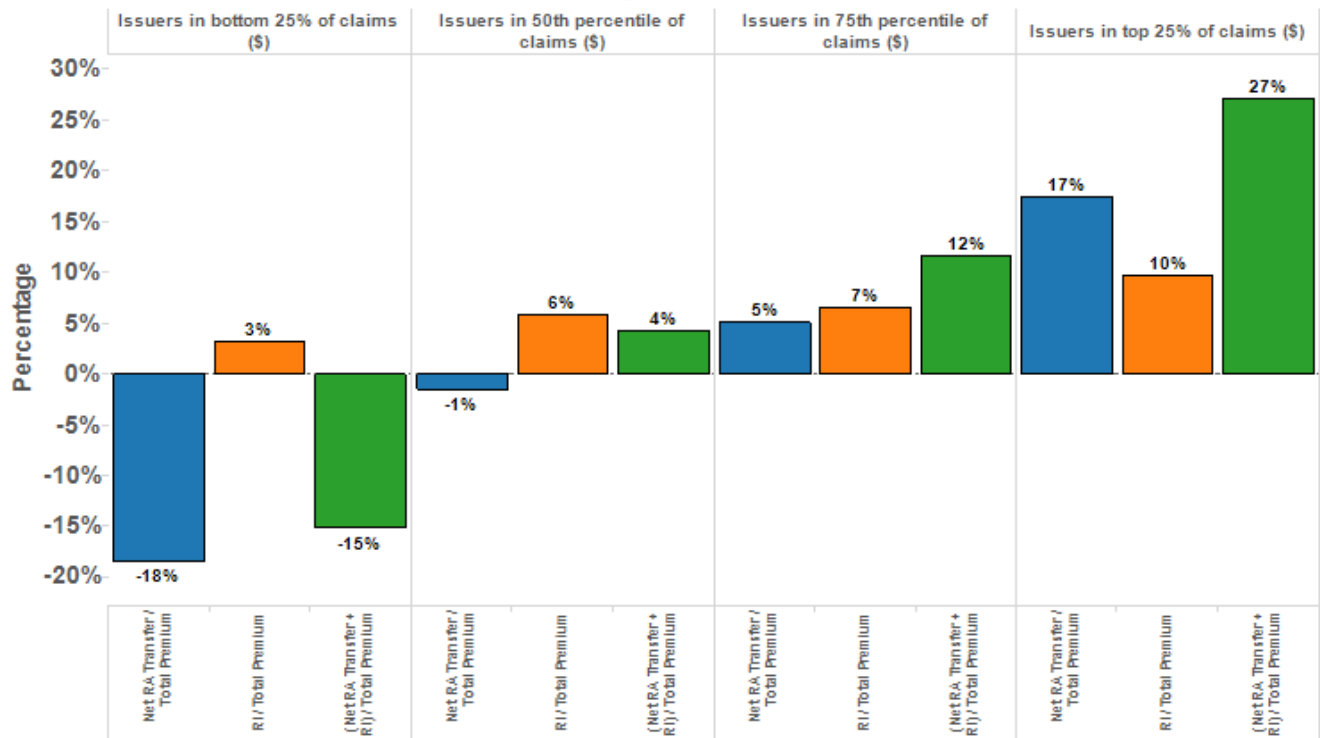

Both the transitional reinsurance program and the permanent risk adjustment program are working as intended in compensating plans that enrolled higher-risk individuals, thereby protecting issuers against adverse selection within a market within a state and supporting them in offering products that serve all types of consumers.

¹ As stated in 45 C.F.R. § 153.230(d), “if HHS determines that all reinsurance payments requested...for a benefit year will not be equal to the amount of contributions collected, HHS will determine a uniform pro rata adjustment.” As such, CMS can update the coinsurance rate after HHS determines the total amount of reinsurance payments requested. The initial, estimated reinsurance coinsurance rate for the 2016 benefit year is subject to change -- and may increase or decrease -- in light of differences between projected and actual reinsurance contribution collections, discrepancies and appeals.

- For example, we have found that:
 - **For the 2016 benefit year, risk adjustment transfers as a percent of premiums were similar to the 2014 and 2015 benefit years.** In the 2014 and 2015 benefit years, the absolute value of risk adjustment transfers averaged 10 percent of premiums in the individual market and 6 percent of premiums in the small group market. In the 2016 benefit year, the absolute value of risk adjustment transfers as a percent of premium increased to 11 percent of premiums in the individual market and stayed consistent in the small group at 6 percent of premiums. This occurred primarily because of a shift in healthy enrollees from platinum and gold plans to silver and bronze plans in the individual market.

Figure 1

Net RA Transfer and Reinsurance as Percent of Total Premiums, Average for Issuers in Each Claims Quartile, 2016

- **Amount of paid claims is strongly correlated with both risk adjustment and reinsurance transfers.** (See Figure 1.) Risk adjustment is intended to transfer funds from issuers with low actuarial risk to plans with high actuarial risk. Risk adjustment, when combined with the transitional reinsurance program, compensated issuers for high-cost enrollees. Issuers with relatively high paid claims amounts were more likely to be compensated by risk adjustment payments, while issuers with relatively low paid claims amounts were more likely to be assessed charges. For example, in the individual market, issuers in the lowest quartile of claims costs, on average, were

assessed a risk adjustment charge of approximately 18 percent of total collected premiums. Conversely, issuers in the highest quartile of claims costs received a risk adjustment payment of about 27 percent of their total premiums. These correlations confirm that risk adjustment is working as intended to transfer funds from issuers with low actuarial risk to plans with high actuarial risk. Likewise, issuers with higher claims costs also received larger reinsurance payments.

Figures 2 & 3

- **Predictability between interim and final risk scores was noticeably**

improved in the 2016 benefit year (Figures 2 & 3). For the 2015 benefit year, the initial year CMS provided interim risk scores, 20 states plus the District of Columbia received interim risk adjustment results. For the 2016 benefit year, 48 states plus the District of Columbia received interim results, marking a significant improvement in the quality and quantity of issuer data submissions. In addition to the significant increase in the number of issuers and states eligible for interim risk scores for the 2016 benefit year, there was also marked improvement in predictability of transfers by risk score quartile as compared with 2015 in both markets. This increased predictability associated with interim risk scores reflects higher quality data earlier in the data submission process and provides more reliable estimates prior to final data submission for issuers' rate setting and financial forecasts.

- **Risk scores were stable in the individual market and decreased in the small group market.** There were a number of reasons to believe that risk scores would be higher for the 2016 benefit year relative to the 2014 benefit year. The average enrollee was enrolled for more months in 2016 relative to 2014. Total claims volume is higher when individuals are enrolled for longer periods of time, leading to increased numbers of reported diagnoses, higher risk scores, and greater paid claims amounts per member, even when the risk profile of the membership is held constant. Further, in the third year of operation, issuers would have more experience submitting claims to the EDGE server and properly capturing diagnoses for purposes of risk adjustment. All of these factors would cause an increase in average risk score (the measure of actuarial risk) without representing an increase in the actuarial risk of the membership. Despite these factors, risk scores were stable in the individual market and decreased by 4 percent in the small group market.

II. Background

The Patient Protection and Affordable Care Act established a transitional reinsurance program (in section 1341) and a permanent risk adjustment program (in section 1343), two of three premium stabilization programs, to provide payments to health insurance issuers that cover higher-cost and higher-risk populations to more evenly spread the financial risk borne by issuers and help stabilize premiums. This report reflects the final estimated results of the risk adjustment and reinsurance programs for the 2016 benefit year, the third year those programs have operated and the final year for the transitional reinsurance program.

The reinsurance program is designed to provide issuers with greater payment stability, for coverage both through, and outside of, Exchanges as the insurance market reforms are implemented and the Exchanges facilitate increased enrollment. The reinsurance program has helped reduce the uncertainty of insurance risk in the individual market by partially offsetting issuers' claims associated with high-cost enrollees. For the 2016 benefit year, HHS operated the reinsurance program for all 50 states and the District of Columbia.²

² See, <https://www.cms.gov/CCIIO/Resources/Regulations-and-Guidance/Downloads/Transitional-Reinsurance-Program-%E2%80%93-CMS-to-Begin-Operating-on-behalf-of-the-State-of-Connecticut.pdf>.

The risk adjustment program provides payments to health insurance issuers that attract high-risk enrollees, such as those with chronic conditions, reduces the incentives for issuers to avoid those enrollees, and lessens the potential influence of risk selection on the premiums that plans charge. The risk adjustment program therefore ensures that plans offering a wide range of benefit designs are available to consumers at an affordable premium.

As described in the HHS Notice of Benefit and Payment Parameters for 2014 Final Rule (78 Fed. Reg. 15,409), the risk adjustment methodology developed by the Department of Health and Human Services (HHS) is based on the premise that premiums should reflect the differences in plan benefits, quality, and efficiency – not the health status of the enrolled population. The HHS-operated risk adjustment methodology determines each plan's risk adjustment transfer amount based on the actuarial risk of enrollees, the actuarial value of coverage, utilization and the cost of doing business in local rating areas, and the effect of different cost-sharing levels on utilization. This methodology, which HHS applied in 49 states and the District of Columbia for the 2016 benefit year,³ transfers funds from plans with low risk enrollees to plans with high risk enrollees.

Pursuant to 45 C.F.R. § 153.240(b)(1)(i), HHS is making a report available today to each issuer of a reinsurance-eligible plan that includes the issuer's initial, estimated reinsurance payment for the 2016 benefit year, calculated based on the reinsurance contributions HHS has already collected and the contributions that are scheduled to be collected by November 15, 2017, and reflecting the initial, estimated 2016 coinsurance rate of 52.9 percent.⁴ Pursuant to 45 C.F.R. § 153.310(e), HHS also made a report available on June 16, 2017, to each issuer of a risk adjustment covered plan that includes the issuer's risk adjustment payment or charge for the 2016 benefit year.⁵

In addition to the reports for issuers described above, HHS is publishing this report, which makes publicly available certain summary data and issuer-specific data on the reinsurance and HHS risk adjustment programs for the 2016 benefit year.

We note that data included in this report reflect amounts calculated based on the 2016 benefit year reinsurance payment parameters and risk adjustment methodology outlined in regulation (78 Fed. Reg. 15409 (Mar. 11, 2013), 79 Fed. Reg. 13743 (Mar. 11, 2014), 80 Fed. Reg. 10749 (Feb. 27, 2015), 81 Fed. Reg. 12203 (Mar. 8, 2016) and 45 C.F.R. Part 153) and is provided for informational purposes. These amounts do not constitute specific obligations of Federal funds to any particular issuer or plan.

III. Transitional Reinsurance Program Summary Data

Section 1341(b)(2)(B) of the Patient Protection and Affordable Care Act directs the Secretary, in establishing the Federal standards for the transitional reinsurance program, to include a formula for determining the amount of reinsurance payments to be made to

³ Massachusetts operated its own risk adjustment program for the 2016 benefit year.

⁴ This report will reflect an issuer's initial, estimated reinsurance payment for the 2016 benefit year and these amounts are subject to change – and may increase or decrease – due to differences between projected and actual reinsurance contribution collections, discrepancies and appeals.

⁵ HHS notified issuers through an announcement from <https://www.regtap.info/> when the reports were available for download through the EDGE server management console.

individual market issuers for high-cost individuals that provides for the equitable allocation of funds. In the Premium Stabilization Rule Final Rule (77 Fed. Reg. 17219 at 17228) (Mar. 23, 2012), we provided that reinsurance payments to eligible issuers will be made for a portion of an enrollee's claims costs paid by the issuer (the coinsurance rate, meant to reimburse a proportion of claims while giving issuers an incentive to contain costs) that exceeds an attachment point (when reinsurance would begin), subject to a reinsurance cap (when the reinsurance program stops paying claims for a high-cost individual). The coinsurance rate, attachment point, and reinsurance cap together constitute the uniform reinsurance payment parameters. For the 2016 benefit year, HHS established a \$90,000 attachment point and \$250,000 reinsurance cap (80 Fed. Reg. 10749 at 10777 (Feb. 27, 2015)). Below we set forth the initial, estimated, and projected coinsurance rate for the 2016 benefit year.

Table 1: Reinsurance Summary Data

SUMMARY DATA ELEMENT	TOTALS
Number of Issuers with 2016 Benefit Year Reinsurance-Eligible Individual Market Plans, Nationwide	496
Number of Issuers Receiving 2016 Benefit Year Reinsurance Payments, Nationwide ⁶	445
Current Total Dollar Value of 2016 Benefit Year Reinsurance Payment Requests ⁷	\$7.5 billion
Estimated Total Amount of 1 st Reinsurance Payments – Using Total 2016 Benefit Year Reinsurance Contributions Available for Reinsurance Payments as of April 30, 2017 ⁸	\$3.3 billion
Initial, Estimated Coinsurance Rate for 2016 Benefit Year 1 st Reinsurance Payments – Based on Contributions Available for Reinsurance Payments as of April 30, 2017 ⁹	83 percent of the 52.9 percent initial, estimated coinsurance rate
Projected Coinsurance Rate for 2016 Benefit Year Based on Total Contribution Collections Available for Reinsurance Payments – Collected and Projected for 2016 Benefit Year ¹⁰	52.9 percent coinsurance rate

⁶ Reinsurance-eligible issuers with enrollee(s) whose paid claims exceeded the \$90,000 attachment point threshold for reinsurance payments for the 2016 benefit year.

⁷ As noted above, this total amount of reinsurance payments requested may change due to discrepancies and appeals.

⁸ CMS will remit another reinsurance payment once the November 15, 2017 contributions are collected.

⁹ In the HHS Notice of Benefit and Payment Parameters for 2016 Final Rule, published on February 27, 2015 (80 Fed. Reg. 10,749 at 10,777 FR, 10750, 10777) the 2016 benefit year coinsurance rate was set at 50 percent. Consistent with 45 C.F.R. § 153.230(d) and the HHS Notice of Benefit and Payment Parameters for 2017 Final Rule, published on March 8, 2016 (81 Fed. Reg. 12, 203 at 12,231), this has been increased to an initial, estimated coinsurance rate of 52.9 percent. This amount may change due to differences between projected and actual reinsurance contribution collections, discrepancies and appeals.

¹⁰ This report will reflect issuers' payment amounts using the initial, estimated coinsurance rate for the 2016 benefit year. We note that these amounts are subject to change – and may increase or decrease – due to differences between projected and actual reinsurance contribution collections, discrepancies and appeals.

IV. HHS Risk Adjustment Program Summary Data¹¹

Table 2 sets forth HHS risk adjustment program summary data, including the number of issuers participating in HHS risk adjustment transfers.

Table 2: HHS Risk Adjustment Program Summary Data¹²

HHS RISK ADJUSTMENT TRANSFER CATEGORY	NUMBER OF ISSUERS WITH RISK ADJUSTMENT COVERED PLANS IN HHS RISK ADJUSTMENT¹³
Total Number of Issuers Participating in HHS Risk Adjustment Transfers	709
Number of Issuers with Individual Non-Catastrophic Plans	469
Number of Issuers with Individual Catastrophic Plans	247
Number of Issuers with Small Group Plans	552
Number of Issuers in a Merged Market (Individual and Small Group)	2

Table 3 illustrates the national average enrollment weighted monthly premium by risk pool and the total percent of dollars that is expected to be transferred within each state market by using the absolute value of net transfers for each issuer operating within the market risk pool. The percentages are calculated based on summation of the absolute value of net transfers for each issuer in a specific market risk pool. This means that for net charges (otherwise reported as negative) we included the absolute value in the equation, net payments are already positive. This amount is then divided by the total premium for the market risk pool, which is calculated as the sum of the products of plan average premium and the billable member months.

¹¹ All data summarized in this report was calculated using 2016 benefit year EDGE Data. For the 2016 benefit year, Massachusetts was the only state electing to operate a risk adjustment program. Data displayed for risk adjustment does not include Massachusetts.

¹² The total of the three market risk pool groups on this table will not sum to the total issuers with risk adjustment transfer calculations because some issuers provided plans in multiple markets.

¹³ Counts for issuers with a default charge are not included in counts for the market in which they are being assessed this charge. Issuers that participated in Massachusetts’s risk adjustment program are also not represented here.

Table 3: National Average Enrollment Weighted Monthly Premium by Risk Pool¹⁴ and HHS Risk Adjustment Absolute Value of Transfer Amounts as a Percent of Premium by Risk Pool

RISK POOL	NATIONAL AVERAGE ENROLLMENT WEIGHTED MONTHLY PREMIUM	ABSOLUTE VALUE OF TRANSFER AMOUNTS AS A PERCENT OF PREMIUM¹⁵
Individual	\$391.86	11 percent
Small Group	\$455.46	6 percent
Catastrophic	\$158.73	15 percent
Merged	\$496.97	0.13 percent
National Average	\$414.54	8 percent

V. HHS Risk Adjustment Program State-Specific Data

In Appendix A¹⁶ we set forth the risk adjustment state averages with billable member months for the 2016 benefit year. Appendix A includes the state average monthly premiums by state and risk pool (catastrophic, individual and small group), the state average plan liability risk score by state and risk pool, state average allowable rating factor by state and risk pool, state average actuarial value by state and risk pool, and state billable member months. We also include in Appendix A the risk score by metal level and the national distribution of enrollment in each metal level, that is the percentage of enrollment in each metal level. We note that some data elements in Appendix A may not match the state risk pool averages found on issuers’ reports in state risk pools that had a material discrepancy resulting in payment adjustments after the calculation of risk adjustment transfers.

Below we set forth a description of the calculations for state average premium, state average plan liability risk score, state average allowable rating factor, state average actuarial value and billable member months.

DATA ELEMENT	DESCRIPTION
State Average Premium	The state average premium for state market risk pool is the weighted average monthly premium for the state market risk pool, weighted by plan share of statewide enrollment in the state market risk pool.
State Average Plan Liability Risk Score (PLRS)	The state average PLRS is calculated as the summed products of PLRS and billable member months for all plans within the state market risk pool divided by total billable months for all plans within the state market risk pool.

¹⁴ Data includes only those issuers that successfully submitted data to the EDGE server as part of the HHS risk adjustment program. Premiums represent the average per member per month amount. They do not include any reduction in premiums due to advance payments of the premium tax credit.

¹⁵ Absolute value of net transfer charge or payment calculated at issuer level and rounded to the nearest percentage point unless otherwise specified.

¹⁶ For the 2016 benefit year, Massachusetts was the only state electing to operate a risk adjustment program. Therefore, Massachusetts is not reflected in Appendix A.

DATA ELEMENT	DESCRIPTION
State Average Allowable Rating Factor (ARF)	The state average ARF is calculated as the summed products of ARF and billable member months for the plans within the state market risk pool divided by total billable member months for all plans in the state market risk pool.
State Average Actuarial Value (AV)	The state average AV is calculated as the summed products of AV and billable member months for the plans within the state market risk pool divided by the total billable member months within the state market risk pool. AV corresponds with metal and catastrophic tiers as follows: *Catastrophic: 0.57 *Bronze: 0.60 *Silver: 0.70 *Gold: 0.80 *Platinum: 0.90
Billable Member Months	Billable member months are the member months of an individual or family policy that are included when setting the policy’s premium rate.

VI. HHS Risk Adjustment Geographic Cost Factor (GCF)

In Appendix B, we set forth the geographic cost factor (GCF) including billable member months by state and rating area. The purpose of the GCF adjustment is to remove differences in premium due to allowable geographic rating variation. GCFs are calculated for each rating area established by the state under 45 CFR 147.102(b).

The GCFs are calculated based on the observed average silver plan premium for the metal-level risk pool (calculated separately for individual and small group if the state does not have a merged market) or catastrophic plan premium for the catastrophic risk pool, in a geographic area relative to the statewide average silver or catastrophic plan premium. Calculation of the GCF involves three steps. First, the average premium is computed for each silver or catastrophic plan, as applicable, in each rating area (using the same formula that is used to compute plan premiums in the statewide average premium calculation). The second step is to generate a set of plan average premiums that standardizes the premiums for age rating. Plan premiums are standardized for age by dividing the average plan premium by the plan rating factor (calculated at the rating area level), the enrollment-weighted rating factor applied to all billable members. Lastly, a GCF is computed for each rating area. The GCF is simply the ratio of the enrollment-weighted average age-standardized premium revenue for a rating area to the overall statewide enrollment-weighted average age-standardized premium revenue for all silver plans. The enrollment-weighted statewide average of plan GCF values will equal 1.0, so the GCF can be interpreted as the percentage by which any geographic area’s costs deviate from the state average.¹⁷

The GCF including billable member months by state and rating area are set forth in Appendix B.

¹⁷ A GCF of zero indicates no silver plans in the rating area. In final risk adjustment calculations, a GCF of zero will have an imputed value of one.

VII. Risk Adjustment and Reinsurance Program Issuer-Specific Data

Below we set forth the 2016 benefit year initial, estimated reinsurance payment amounts and the risk adjustment transfer amounts by issuer.

**Not Eligible or “\$-” or \$0 reinsurance payment:* Some issuers are not considered in the risk adjustment calculations because they have no 2016 benefit year enrollment in individual or small group market health insurance plans or because they have no enrollment in risk adjustment covered plans.¹⁸ Similarly, those issuers that had no 2016 benefit year enrollment in individual market plans, did not have claims cost that exceeded the attachment point, or are small group only issuers are not eligible or have zero (\$0.00) for reinsurance payments.

***For the 2016 benefit year, Massachusetts was the only state electing to operate its own risk adjustment program. Therefore, in Table 4 below, we do not list any Massachusetts issuers’ risk adjustment transfer amounts. These issuers’ risk adjustment transfer amounts will be listed as “N/A – MA Issuer.”*

Table 4: Issuer-Specific Information¹⁹

HIOS ID	HIOS INPUTTED INSURANCE COMPANY NAME	STATE	REINSURANCE PAYMENT AMOUNT (OR NOT ELIGIBLE)	HHS RISK ADJUSTMENT TRANSFER AMOUNT (INDIVIDUAL MARKET, INCLUDING CATASTROPHIC)	HHS RISK ADJUSTMENT TRANSFERS AMOUNT (SMALL GROUP MARKET)
11082	Aetna Life Insurance Company	AK	Not Eligible	\$-	(\$1,188,058.34)
38344	Premera Blue Cross	AK	\$5,758,679.10	\$11,418,310.79	\$4,017,476.01
73836	Moda Health Plan Inc	AK	\$8,987,021.64	(\$11,418,310.77)	(\$2,026,261.96)
80049	UnitedHealthcare Insurance Company	AK	Not Eligible	\$-	(\$803,155.69)
44580	Humana Insurance Company	AL	\$2,298,478.10	(\$13,518,890.18)	\$-
44902	Federated Mutual Insurance Company	AL	Not Eligible	\$-	(\$32,889.86)
46944	Blue Cross and Blue Shield of Alabama	AL	\$48,065,429.70	\$24,939,398.79	\$2,294,842.22
59809	UnitedHealthcare Life Insurance Company	AL	\$111,220.27	(\$959,823.85)	\$-

¹⁸ A risk adjustment covered plan is defined under 45 C.F.R. § 153.20 as any health insurance coverage offered in the individual or small group market with the exception of grandfathered health plans, group health insurance coverage described in 45 C.F.R. § 146.145(c), individual health insurance coverage described in 45 C.F.R. § 148.220, and any plan determined not to be a risk adjustment covered plan in the applicable federally certified risk adjustment methodology.

¹⁹ Table 5 provides the issuer specific information for Vermont issuers.

HIOS ID	HIOS INPUTTED INSURANCE COMPANY NAME	STATE	REINSURANCE PAYMENT AMOUNT (OR NOT ELIGIBLE)	HHS RISK ADJUSTMENT TRANSFER AMOUNT (INDIVIDUAL MARKET, INCLUDING CATASTROPHIC)	HHS RISK ADJUSTMENT TRANSFERS AMOUNT (SMALL GROUP MARKET)

VIII. HHS Default Risk Adjustment Charge

Pursuant to 45 C.F.R. § 153.740(b), HHS will assess a default risk adjustment charge if an issuer of a risk adjustment covered plan fails to establish a dedicated distributed data environment (EDGE server) or fails to provide HHS with access to sufficient data such that HHS cannot apply the applicable federally certified risk adjustment methodology to calculate the risk adjustment payment transfer amount for the risk adjustment covered plan in a timely fashion.

The total default risk adjustment charge for a risk adjustment covered plan equals a per-member per-month (PMPM) amount multiplied by the plan’s enrollment – either provided by the issuer or sought from other reliable sources. The PMPM charge for a plan is equal to the product of the statewide average premium (expressed as a PMPM amount) for a risk pool and the 90th percentile plan risk transfer amount expressed as a percentage of the respective statewide average PMPM premiums for the risk pool. The nationwide percentile reflects only plans in states where HHS is operating the risk adjustment program and is calculated based on the absolute value of plan risk transfer amounts. The determined PMPM amount is then multiplied by a noncompliant plan’s enrollment, to establish the plan’s total default risk adjustment charge.

The 2016 benefit year is the first year small issuers – that is, issuers with 500 or fewer billable member months statewide – may elect a lower, separate default risk adjustment charge, which is 14 percent of the applicable statewide average premium in lieu of setting up an EDGE server and submitting data.

All compliant risk adjustment covered plans in the risk pool, in the market, in the state of at least one noncompliant issuer will receive a portion of the default charges collected from the noncompliant issuer(s).²⁰ We allocate default charges collected from noncompliant plans in the risk pool/market/state among the compliant plans in the risk pool/market/state proportional to each compliant plan’s relative revenue requirement as calculated under the transfer formula relative to the market average of these products.²¹

Table 6: HHS Default Risk Adjustment Charge Summary Data

SUMMARY DATA ELEMENT	TOTALS
Number of Issuers with Greater Than 500 Billable Member Months Receiving a Default Risk Adjustment Charge	13
Number of Issuers with 500 Billable Member Months or Fewer Electing to Receive a Default Risk Adjustment Charge	29

²⁰ Because the 2016 benefit year was the first year small issuers could elect to receive a lower, separate default risk adjustment charge, some default charge amounts are so small that a small number of issuers in some State risk pools do not receive any funds from the allocation.

²¹ For issuers owed a default charge allocation payment amount that is less than \$200, CMS will hold payment until after the release of sequestration funds in October or November 2017, so that issuers can receive the full amount (pending collections).

Percent of All Issuers of Risk Adjustment Covered Plans that Received a Default Risk Adjustment Charge	5.6%
--	------
