I. Background

The Patient Protection and Affordable Care Act (ACA) established a permanent risk adjustment program¹ to provide payments to health insurance issuers that attract higher-risk enrollees, such as those with chronic conditions, to reduce the incentives for issuers to avoid those enrollees, and to lessen the potential influence of risk selection on the premiums that issuers charge. The risk adjustment program is designed to support issuers offering a wide range of benefit designs that are available to consumers at an affordable premium. Consistent with section 1321(c)(1) of the ACA, the Department of Health and Human Services (HHS) is responsible for operating the program on behalf of any state that does not elect to do so. HHS operated risk adjustment in all 50 states and the District of Columbia in the 2022 benefit year.

To ensure the integrity of the HHS-operated risk adjustment program and to validate the accuracy of data submitted by issuers for use in transfer calculations under the state payment transfer formula, the Centers for Medicare & Medicaid Services (CMS) performs risk adjustment data validation in states where the HHS-operated risk adjustment program applies. HHS risk adjustment data validation (HHS-RADV) also ensures that issuers' actuarial risk is reflected in transfers and that the HHS-operated risk adjustment program assesses charges to issuers with plans with lower-than-average actuarial risk while making payments to issuers with plans with higher-than-average actuarial risk.

CMS is publishing the annual report on issuers' HHS-RADV adjustments to risk adjustment state transfer results. This report sets forth by HIOS ID and state market risk pool the applicable adjustments to 2022 benefit year risk adjustment state transfers based on the 2022 benefit year HHS-RADV results. The adjustments to 2022 benefit year risk adjustment state transfers are calculated by taking the difference between the 2022 benefit year risk adjustment state transfer amounts that were provided in the Summary Report on Permanent Risk Adjustment Transfers for the 2022 Benefit Year^{2,3} and the adjusted transfer amounts due to the application of HHS-RADV error rates.⁴ These HHS-RADV adjustment amounts will be collected (if an HHS-RADV charge amount is owed) in the fall of 2024 and subsequently paid (if an HHS-RADV payment amount is due), pending collections.

¹ See section 1343 of the ACA.

² The Summary Report on Permanent Risk Adjustment Transfers for the 2022 Benefit Year (released June 30, 2023) can be found at: <https://www.cms.gov/files/document/summary-report-permanent-risk-adjustment-transfers-2022-benefit-year.pdf>.

³ If applicable for the benefit year, some issuers received information on updated state transfer amounts that differ from the amounts in the Summary Report on Permanent Risk Adjustment Transfers. See *supra* note 2. These updates reflect adjustments due to material late-filed actionable discrepancies.

⁴ On May 14, 2024, HHS released the 2022 benefit year HHS-RADV results. This included the publication of the 2022 Benefit Year HHS-RADV Results Memo, as well as the release of Issuer-Specific Metrics Reports and Enrollee-Level Metrics Reports to issuers through the HHS-RADV Audit Tool. The 2022 Benefit Year HHS-RADV Results Memo included an overview of the 2022 benefit year HHS-RADV results, including national program benchmarks, state market risk pool weighted average error rates, and HHS-RADV failure rate group definitions. See the 2022 Benefit Year HHS-RADV Results Memo at <https://www.cms.gov/files/document/by22-hhs-radw-results-memo-appendix-pdf.pdf>. The HHS-RADV Audit Tool can be accessed by issuers (issuer SO, back-up SO and RADV coordinators) at: <https://ccrms-rari.force.com/HHSRADVAuditTool/>.

Issuers will also receive new issuer-specific transfer reports for the 2022 benefit year, which include the 2022 benefit year HHS-RADV adjustment amounts, the risk adjustment state transfer amounts that were provided in the Summary Report on Permanent Risk Adjustment Transfers for the 2022 Benefit Year⁵ (unless impacted by a material late-filed actionable discrepancy or a successful appeal), and the adjusted state transfer amounts due to the application of HHS-RADV error rates. The data included in these reports reflect amounts calculated based on the applicable methodology established through notice with comment rulemaking,⁶ prior to the resolution of HHS-RADV discrepancies and appeals and are provided for informational purposes. These amounts do not constitute specific obligations of Federal funds to any particular issuer or plan.

II. HHS-RADV Summary Data

The 2022 benefit year HHS-RADV results impacted 85 out of 145 state market risk pools due to the identification of outlier issuers.⁷ In comparison, in the 2021 benefit year 86 out of 144 state market risk pools had 2021 benefit year risk scores and state transfers adjusted due to outlier issuers.⁸ For more information on the 2022 benefit year HHS-RADV results, please refer to the 2022 Benefit Year HHS-RADV Results Memo.⁹

We set forth the summary data reflecting the application of the 2022 benefit year HHS-RADV results on risk adjustment state transfers below. The figures and table below also provide a comparison of this data to summary information on 2021 benefit year HHS-RADV results applied to 2021 benefit year state transfers.¹⁰

Figure 1: Total Absolute HHS-RADV Adjustments as a Percent of Total Premiums Among State Market Risk Pools with HHS-RADV Adjustments¹¹

⁵ See *supra* note 2.

⁶ See, e.g., the HHS Notice of Benefit and Payment Parameters for 2019, 83 FR at 16961 – 16965 (April 17, 2018) (2019 Payment Notice), the Amendments to the HHS-Operated Risk Adjustment Data Validation (HHS-RADV) Under the Patient Protection and Affordable Care Act's HHS-Operated Risk Adjustment Program; 85 FR 76979 (December 1, 2020) (2020 HHS-RADV Amendments Rule), the HHS Notice of Benefit and Payment Parameters for 2023; 87 FR 27208 (May 6, 2022) (2023 Payment Notice), and the HHS Notice of Benefit and Payment Parameters for 2024; 88 FR 25740 (April 27, 2023) (2024 Payment Notice).

⁷ If an issuer operates in both a single issuer market risk pool and another market risk pool with multiple issuers within the same state and does not meet any other exemption requirements, then this issuer may be selected to participate in HHS-RADV and could be identified as an outlier and receive a positive or negative error rate. In the single issuer market risk pool, however, the risk adjustment state transfer amount remains zero after applying the error rate. As such, a single issuer state market risk pool with an outlier issuer is not impacted by HHS-RADV.

⁸ The increase in state small group market risk pools is due to Vermont un-merging its individual non-catastrophic and small group market risk pools starting with the 2022 benefit year. See https://regtap.cms.gov/uploads/library/RA_MergedMarketsFAQ_021522_5CR_021522.pdf

⁹ See *supra* note 4.

¹⁰ See the Summary Report of 2021 Benefit Year Risk Adjustment Data Validation Adjustments to Risk Adjustment State Transfers (released July 18, 2023) at: <https://www.cms.gov/files/document/hhs-radiv-adjustments-by21-ra-transfers-report.pdf>

¹¹ Merged market non-catastrophic risk pools are reported under the individual non-catastrophic market risk pool.

For the 2022 benefit year, in state market risk pools with HHS-RADV adjustments, absolute HHS-RADV adjustments as a percent of premiums decreased when compared to the 2021 benefit year HHS-RADV adjustments (Figure 1). The decrease in 2022 benefit year HHS-RADV adjustments as a percent of premium reflects a continuing trend towards lower HHS-RADV adjustments on average to risk adjustment state transfers year-over-year across most state market risk pools for the fifth year in a row.

Table 1: Number of States with Adjusted Risk Adjustment Transfers Due to HHS-RADV

	Individual, Non-Catastrophic ¹²		Small Group		Individual, Catastrophic	
	2021 RA	2022 RA	2021 RA	2022 RA	2021 RA	2022 RA
	with 2021 RADV	with 2022 RADV	with 2021 RADV	with 2022 RADV	with 2021 RADV	with 2022 RADV
Number of States with Risk Adjustment Covered Plans ¹³	51	51	49	50	44	44
Number of States with Adjusted Risk Adjustment Transfers Due to HHS-RADV ¹⁴	32	33	35	35	19	17

The number of states with HHS-RADV adjustments to risk adjustment state transfers increased by one in the small group market risk pool and remained constant in the individual non-catastrophic and individual catastrophic market risk pools from 2021 to 2022.¹⁵

¹² Ibid.

¹³ See 45 CFR 153.20 for a definition of “Risk Adjustment Covered Plan”.

¹⁴ These numbers exclude single issuer market risk pools in which the single issuer had a non-zero error rate.

¹⁵ See *supra* note 8.

Figure 2: Likelihood of 2022 Benefit Year State Market Risk Pools having HHS-RADV Adjustments, by Adjustment Status in Previous Benefit Years^{16,17}

Figure 2 shows the likelihood of whether a state market risk pool has HHS-RADV adjustments in the 2022 benefit year based on whether the state market risk pool had an HHS-RADV adjustment in a previous benefit year of HHS-RADV. The left bar chart shows that in the individual non-catastrophic market risk pool, if there were HHS-RADV adjustments to state transfers for the state market risk pool in 2021, then there is an approximately 84 percent chance that the same state market risk pool will have HHS-RADV adjustments in the 2022 benefit year. When considering the presence of adjustments in the state market risk pool over multiple prior years of HHS-RADV, the relationship between the presence of prior adjustments and adjustments in the 2022 benefit year remains strong but is slightly weaker than the relationship between the presence of a 2021 benefit year HHS-RADV adjustment and HHS-RADV adjustments in the 2022 benefit year. Specifically, if the state market risk pool had HHS-RADV adjustments in at least one year between 2018 and 2021, the chance that it will have HHS-RADV adjustments in the 2022 benefit year is approximately 76 percent. This pattern remains consistent across state market risk pools, indicating that having a recent HHS-RADV adjustment in a state market risk pool is likely a fair predictor of having HHS-RADV adjustments for future benefit years in that state market risk pool.

In the right bar chart, which demonstrates the predictability that a state market risk pool without recent HHS-RADV adjustments will continue to not have HHS-RADV adjustments, the trend across state market risk pools is less consistent. In the individual non-catastrophic and

¹⁶ See *supra* note 11.

¹⁷ Figure 2 includes single issuer state market risk pools, which will not have HHS-RADV adjustments even if the single issuer is identified as an outlier in HHS-RADV.

catastrophic market risk pools, the lack of an HHS-RADV adjustment in the prior benefit years seems to predict a lack-of-adjustment in the 2022 benefit year of HHS-RADV. For instance, in the individual non-catastrophic market risk pool, if there were no HHS-RADV adjustments in a state market risk pool in the 2021 benefit year, then there is an approximately 68 percent chance that the state market risk pool will not have HHS-RADV adjustments in the 2022 benefit year. This number increases to approximately 89 percent if there were no HHS-RADV adjustments in a state market risk pool in at least one year between 2018 and 2021. The relationship is even stronger for the non-catastrophic individual market risk pools when considering adjustment status over multiple prior years of HHS-RADV. In contrast, in the small group market risk pool, if there were no HHS-RADV adjustments in the 2021 benefit year in a state market risk pool, then there is an approximately 53 percent chance that the state market risk pool will not have HHS-RADV adjustments in the 2022 benefit year, compared to an approximately 33 percent chance if it had no HHS-RADV adjustments between 2018 and 2021. However, this inconsistency with the individual non-catastrophic and catastrophic market risk pools could be attributed to only three states in the 2022 small group market risk pool having no HHS-RADV adjustments between the 2018 and 2021 benefit years.

Figure 3: Percent and Counts of Issuers by Market Risk Pool with HHS-RADV Adjustment Payments and Charges¹⁸

Figure 3 shows that the percentage of issuers receiving an HHS-RADV payment remained relatively stable in the individual non-catastrophic market risk pool and decreased in the small group and individual catastrophic market risk pools across the 2021 and 2022 benefit years' HHS-RADV adjustments. Across the 2022 and 2021 benefit years' HHS-RADV adjustments, the percentage of issuers receiving an HHS-RADV adjustment charge remained relatively stable in the individual non-catastrophic market risk pool. However, in the small group market and

¹⁸ See *supra* note 11.

individual catastrophic market risk pools, the percentages of issuers receiving an HHS-RADV charge increased in the 2022 benefit year.

III. Issuer-Specific 2022 HHS-RADV Adjustments to 2022 Risk Adjustment State Transfers for Non-Merged Market States

Below we set forth by issuer and by state market risk pool the adjustments to 2022 benefit year risk adjustment state transfers based on the 2022 benefit year HHS-RADV results.¹⁹

The issuer “RADV Adjustment Amount” represents the difference between issuers’ 2022 benefit year risk adjustment state transfer amount and the adjusted state transfer amount due to the application of 2022 benefit year HHS-RADV error rates. The RADV Adjustment Amount is the amount that will be collected in the fall of 2024, and subsequently paid, pending collections. As noted above, the RADV Adjustment Amounts are subject to change due to HHS-RADV actionable discrepancies or successful appeals.

To calculate the issuer RADV Adjustment Amount, CMS first applies HHS-RADV error rates to outlier issuers’ plan liability risk scores ($PLRS_i$) using the following formula:

$$AdjPLRS_i = (1 - TotalER_i) * PLRS_i$$

Where:

- $AdjPLRS_i$ = The plan liability risk score for issuer i after application of the error rate;
- $TotalER_i$ = The total error rate for issuer i,²⁰ and
- $PLRS_i$ = The plan liability risk score recorded on EDGE for issuer i.

Once CMS calculates outlier issuers’ adjusted plan liability risk scores ($AdjPLRS_i$), CMS recalculates transfer amounts under the state payment transfer formula and then aggregates the adjusted transfer amounts at the issuer level. The RADV Adjustment Amount is calculated by taking the difference between each issuer’s benefit year HHS-RADV adjusted transfer amount and the benefit year risk adjustment state transfer amount provided in the Summary Report on Permanent Risk Adjustment Transfers for the Benefit Year.²¹

$$RADV\ Adjustment\ Amount_i = AdjT_i - T_i$$

Where:

- $AdjT_i$ = The transfer amount calculated using the state payment transfer formula with application of the HHS-RADV error rate to adjust issuer PLRS ($AdjPLRS_i$); and

¹⁹ See *supra* note 2. Risk adjustment transfer amounts announced in the applicable benefit year’s summary report are subject to change based on material late-filed actionable discrepancies, as well as successful appeals.

²⁰ An explanation of how $TotalER_i$ is calculated for each issuer is described in the 2022 Benefit Year HHS-RADV Protocols, available at: https://regtap.cms.gov/reg_librarye.php?i=4469.

²¹ See *supra* notes 2 and 3. If applicable, issuers with material late-filed actionable discrepancies or successful appeals in their state market risk pools will have an additional adjustment amount that will be incorporated into this calculation.

- T_i = The transfer amount calculated using the state payment transfer formula with issuer PLRS (PLRS_i) (generally the amount set forth in the applicable benefit year’s Summary Report on Permanent Risk Adjustment Transfers)

The application of HHS-RADV error rates to outlier issuers’ risk scores affects the state average risk score for a state market risk pool, which is used in the recalculation of state transfers to determine HHS-RADV adjustment payments or charges. Therefore, the effect of one or more issuers’ error rate(s) on risk scores affects other issuers’ risk adjustment state transfer calculations in that state market risk pool. Issuers without HHS-RADV error rates will not receive an adjustment to their EDGE PLRS_i, but those issuers’ risk adjustment state transfers could be subject to HHS-RADV adjustments if there are other issuers that are identified as outliers (i.e., have non-zero error rates) in their state market risk pools.

If an issuer does not have enrollment in a state market risk pool and thus does not have a risk adjustment state transfer in that market risk pool, the issuer is not included in the applicable state market risk pool table(s) below. We signify “-” in a state market risk pool for which an issuer does not have enrollment, and thus, does not have a risk adjustment state transfer. We signify “\$0.00” for issuers where there is no adjustment being made because there are no outlier issuers in the state market risk pool.²²

Table 2: Issuer-Specific 2022 HHS-RADV Adjustments to 2022 Risk Adjustment State Transfers for Non-Merged Market States (Appendix A)

HIOS ID	HIOS INSURANCE COMPANY NAME	STATE	INDIVIDUAL, NON-CATASTROPHIC RADV ADJUSTMENT AMOUNT	INDIVIDUAL, CATASTROPHIC RADV ADJUSTMENT AMOUNT	SMALL GROUP RADV ADJUSTMENT AMOUNT

IV. Issuer-Specific 2022 HHS-RADV Adjustments to 2022 Risk Adjustment State Transfers for Merged Market States

For the 2022 benefit year, Massachusetts was the only state with a merged market for purposes of the HHS-operated risk adjustment program.²³

We signify “-” in a state market risk pool for which an issuer does not have enrollment, and thus, does not have a risk adjustment state transfer. We signify “\$0.00” for issuers where there is no HHS-RADV adjustment being made because there are no outlier issuers in the state market risk pool.²⁴

Table 3: Issuer-Specific 2022 HHS-RADV Adjustments to 2022 Risk Adjustment State Transfers for Merged Market States (Appendix B)²⁵

HIOS ID	HIOS INSURANCE COMPANY NAME	STATE	MERGED MARKET, CATASTROPHIC RISK POOL RADV ADJUSTMENT AMOUNT	MERGED MARKET, INDIVIDUAL NON-CATASTROPHIC PLANS AND SMALL GROUP MARKET RADV ADJUSTMENT AMOUNT
29125	Tufts Associated Health Maintenance Organization, Inc.	MA	-	\$1,073,716.72
31779	UnitedHealthcare Insurance Company	MA	-	\$353,927.28
34484	Health New England	MA	\$179.14	\$458,033.98
36046	Harvard Pilgrim Health Care	MA	-	(\$6,365,828.04)
38712	Tufts Insurance Company	MA	-	\$68,861.05
41304	Mass General Brigham Health Plan, Inc.	MA	-	\$1,023,084.11
42690	Blue Cross and Blue Shield of Massachusetts HMO Blue, Inc	MA	(\$1,095.50)	\$590,357.30
52710	Fallon Health and Life Assurance Company	MA	-	\$36.18
59763	Tufts Health Public Plans	MA	\$916.36	\$1,878,105.13
82569	BMCHP	MA	-	\$796,608.33
88806	Fallon Community Health Plan	MA	-	\$112,027.09
88950	ConnectiCare of Massachusetts, Inc.	MA	-	\$2,402.05
95878	HPHC Insurance Company, Inc.	MA	-	\$8,669.18

²³ Massachusetts and Vermont were both treated as having have a merged market for purposes of the HHS-operated risk adjustment program for the 2017 through 2021 benefit years. Consistent with Vermont’s decision to unmerge its markets, Massachusetts is the only state treated as having a merged market for purposes of the HHS-operated risk adjustment program in the 2022 benefit year. See https://regtap.cms.gov/reg_librarye.php?i=2443 and https://regtap.cms.gov/reg_librarye.php?i=3807.

²⁴ Single issuer state market risk pools with an outlier issuer are not impacted by HHS-RADV and issuers in these state market risk pools will also have a “0.00” transfer amount. See *supra* note 7.

²⁵See *supra* note 23.

V. Default Data Validation Charge

Pursuant to 45 C.F.R. § 153.630(b)(10), HHS will assess a default data validation charge if an issuer of a risk adjustment covered plan fails to engage an initial validation auditor or submit the results of an initial validation audit to HHS.²⁶

For the 2022 benefit year HHS-RADV, no issuers were assessed a default data validation charge. As such, this report does not provide any issuer-specific tables related to 2022 benefit year default data validation charges or allocations.

²⁶ The default data validation charge is calculated in the same manner as the risk adjustment default charge under 45 CFR § 153.740(b) except that the default data validation charge is based on enrollment for the benefit year being audited. *See* the 2020 Payment Notice, 84 FR at 17495 – 17497.

VI. HHS-Operated Risk Adjustment Program State-Specific Data (*Appendix C*)

In *Appendix C*, we set forth the risk adjustment state averages after the application of the 2022 benefit year HHS-RADV error rates with billable member months for the 2022 benefit year. *Appendix C* includes the following data elements after the application of the 2022 benefit year HHS-RADV error rates: state average monthly premiums by state market risk pool (catastrophic, individual non-catastrophic, small group, and merged), the state average plan liability risk score by state market risk pool, state average allowable rating factor by state market risk pool, state average actuarial value by state market risk pool, state average induced demand factor by state market risk pool, and billable member months for each respective benefit year.^{27,28} We also provide a description below of the calculations for state average premium, state average plan liability risk score, state average allowable rating factor, state average actuarial value, state average induced demand factor, and billable member months.

DATA ELEMENT	DESCRIPTION
State Average Monthly Premium	The state average premium for state market risk pool is the weighted average monthly premium for the state market risk pool, weighted by plan share of statewide enrollment in the state market risk pool. Beginning in the 2018 benefit year, a 14 percent administrative cost adjustment is applied to the state average monthly premium. This value is used in the state payment transfer formula calculations for risk adjustment payments and charges.
State Average Monthly Premium Before Adjustment	The state average premium for state market risk pool is the weighted average monthly premium for the state market risk pool, weighted by plan share of statewide enrollment in the state market risk pool before the 14 percent administrative cost adjustment is applied. This value is for informational purposes only and not used in the calculation of risk adjustment payments and charges.
State Average Plan Liability Risk Score (PLRS)	The state average PLRS is calculated as the summed products of PLRS and billable member months for all plans within the state market risk pool divided by total billable months for all plans within the state market risk pool.
State Average Plan Liability Risk Score (PLRS) After RADV	The state average PLRS after HHS-RADV is calculated as the summed products of PLRS with HHS-RADV error rates applied and billable member months for all plans within the state market risk pool divided by total billable months for all plans within the state market risk pool.
State Average Allowable Rating Factor (ARF)	The state average ARF is calculated as the summed products of ARF and billable member months for the plans within the state market risk pool divided by total billable member months for all plans in the state market risk pool.

²⁷ If applicable for the benefit year, some data elements in *Appendix C* have updated information that differs from the state average amounts originally published in conjunction with the Summary Report on Permanent Risk Adjustment Transfers to reflect changes made as a result of material late-filed actionable discrepancies. *See supra* notes 2 and 3.

²⁸ State averages and state transfers are generally subject to change based on material late-filed actionable discrepancies, as well as successful appeals.

DATA ELEMENT	DESCRIPTION
State Average Actuarial Value (AV)	<p>The state average AV is calculated as the summed products of AV and billable member months for the plans within the state market risk pool divided by the total billable member months within the state market risk pool. AV corresponds with metal and catastrophic tiers as follows:</p> <ul style="list-style-type: none"> * Catastrophic: 0.57 * Bronze: 0.60 * Silver: 0.70 * Gold: 0.80 *Platinum: 0.90
State Average Induced Demand Factor (IDF)	<p>The state average IDF is calculated as the summed products of IDF and billable member months for the plans within the state market risk pool divided by the total billable member months within the state market risk pool. IDF corresponds with metal and catastrophic tiers as follows:</p> <ul style="list-style-type: none"> *Catastrophic: 1.00 *Bronze: 1.00 *Silver: 1.03 *Gold: 1.08 *Platinum: 1.15
Billable Member Months	<p>Billable member months are the member months of an individual or family policy that are included when setting the policy's premium rate.</p>
